## **New Mexico- Lovington Field Office** FY 2005 Ranking Criteria Worksheet - Ground & Surface Water Date: \_\_\_\_\_ Total Points: Applicant: Farm No.: \_\_\_\_\_ Field No. \_\_\_\_\_ Tribal Land Non-Tribal Land 1. Water Quantity - 40 Potential Points (20% of Total) Irrigation Efficiency - Use FIRS to Evaluate. Benchmark & After points equal Potential Benchmark actual % efficiency. Ranking Score equals After minus Benchmark. After Points **Points** Points % of Area in Contract After Treatment % of Area in Contract After Treatment Efficiency 50 50 90 90 Actual Total 1. Water Quantity 2. Water Quality - 40 Potential Points (20% of Total) A. Surface Water Pollutants - 20 Points Maximum There is a probability that runoff water from irrigated fields contains sediment, salt, pesticides, and/or nutrients (or other associated chemicals). Treatment is needed to prevent these pollutants from entering live waters, or reentering a shared irrigation system. Points will be awarded based on distance from the end of field to the nearest live waters or re-entry point into a shared irrigation system. If there is no run-off, after points will be 0. Distance of Surface runoff to Live Water Points Benchmark After <100 Ft. 20 0 101 - 500 Ft. 0 15 0 501 - 1,320 Ft. 10 1,320 - 2,640 Ft. 5 0 >2,640 Ft. 0 0 A. Surface Water Total B. Ground Water Pollutants - 20 Points Maximum There is a probability that irrigation water containing salt, pesticides, and/or nutrients (or other associated chemicals) is leaching into the ground water. Treatment is needed to prevent these pollutants from contaminating ground water, through leaching and direct return flow into wells. Points to be awarded based on depth to the water table, or elimination of any direct discharge to ground water (regardless of depth to water table). Depth to Water Table **Points** Benchmark After 1 - 10 Ft or elimination of any direct discharge into ground water. 20 10 - 50 Ft. 0 10 50 -100 Ft. 5 0 >100 Ft. 0 0 B. Ground Water Total
